

2025 CAPABILITY STATEMENT

WHO WE ARE

Truck Whisperer Australia is a specialised automotive repair company based in Benalla, Victoria.

Founded by Ken Dennis, the company has been operational since 2000 and is renowned for its expertise in diagnosing and rectifying complex steering issues in heavy vehicles.

"The Truck Whisperer", Ken Dennis, is a highly experienced individual. His diverse background showcases his determination and skill, as evidenced by his success in roles ranging from flying planes to truck driving and mechanical work.

Truck Whisperer Australia aims to solve long-standing inherent steering problems in heavy vehicles and 4-wheel drives, issues common since the 1960s that are often missed by regular repair shops. The company has created specialised solutions for these unique challenges.

Founder Ken Dennis

WHAT WE DO

At Truck Whisperer Australia, the primary focus is on diagnosing and correcting steering anomalies in heavy vehicles.

For decades, a fundamental steering problem has persisted in heavy vehicles, affecting even brand-new trucks. Many drivers accept imprecise handling, dangerous and wandering steering, and resulting fatigue as unavoidable in their profession. However, we understand the underlying causes and have developed a system to demonstrate a solution.

Using our proprietary Advanced Steering Management System (ASMS), we identify and correct hidden flaws in your steering geometry, giving you:

- Precise tracking
- Precise driver and vehicle control
- Reduced driver fatigue
- Smoother highway handling
- Greatly improved safety and tyre life
- Significant fuel savings

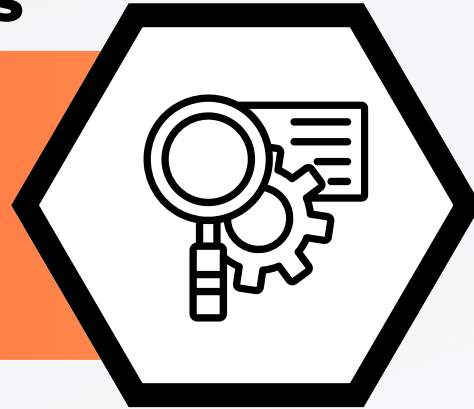

After our service, your truck will not only be improved, it will undergo a complete transformation.

OUR SERVICES

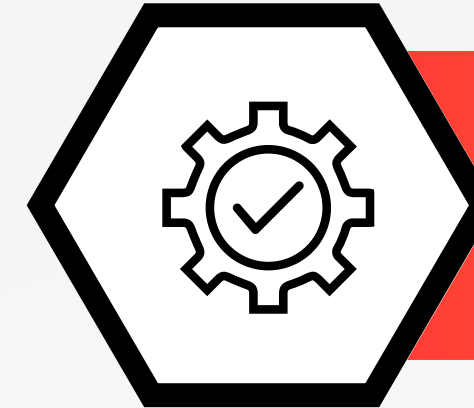

ADVANCED STEERING DIAGNOSTICS

We go deeper than wheel alignments. Our diagnostic process uncovers the root cause of handling issues unknown to other repairers in the industry others miss.

ASMS CORRECTION

Our signature patented advanced steering management system (ASMS) is a complete steering overview that rewrites how your vehicle behaves and responds on the road.

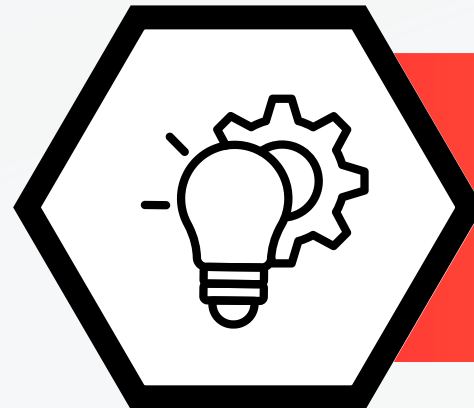

CHASSIS & SUSPENSION CORRECTION

Recalibrating steering setup to work correctly and in perfect harmony with the existing vehicle suspension

ENGINEERING SOLUTIONS

Every vehicle is inspected and assessed for steering imperfections upon arrival, and then corrected or upgraded as necessary. For a one-time fix/correction, taking less than 2 hours.

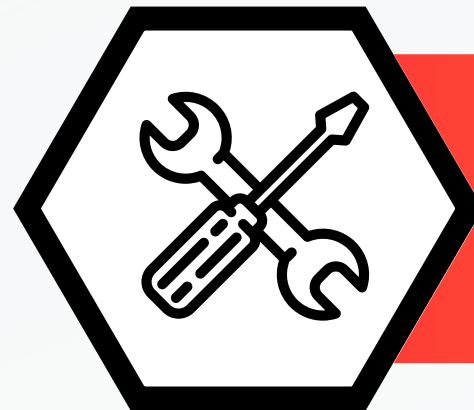

FLEET STEERING OPTIMISATION

For logistics, freight, and mining companies, ensure your entire fleet drives true, reduces wear and tear, and keeps your team safer on long hauls.

ON SITE & WORKSHOP SERVICES

Visit our Benalla facility or request a custom consult for large fleet or remote projects.

WHY WE SUCCEED WHERE OTHERS DON'T

At Truck Whisperer Australia, we specialise in fixing steering problems that others have failed to resolve, often for decades.

The core issue lies in inherent steering anomalies built into heavy vehicles from the factory floor. No matter the make or model, every truck is affected to some degree. These issues go beyond standard alignments and repairs. They require a system that targets the true source of the problem.

Our proprietary Advanced Steering Management System (ASMS) directly addresses these root causes, not just the symptoms. This is why we can deliver outcomes that no other repairers can match:

Common issues we eliminate:

- Wandering
- Heavy steering
- Constant steering pull
- Tyre scalloping
- Aggressive tyre wear
- Understeer
- Poor control
- Steering kickback (bump steer)
- Harsh ride
- Multiple trailer sway and wandering
- Steering vibration
- Excessive driver fatigue
- Loss of steering control after a steer tyre blowout
- Constant cabin rocking (pendulum motion)
- Steering not returning to centre after full lock
- Elimination of car and caravan jack-knifing

OUR PROVEN SYSTEM

- Backed by independent engineering certification through Enkelman & Associates
- Fully insured
- Does not void manufacturer warranty
- Does not increase steering oil pressure or temperature
- Does not degrade steering components
- Reduces driver fatigue by up to 75%
- Exceeds Australian standards for steering control and safety
